Introduction to the dataset

This codebook describes a global expert survey on Perceptions of Electoral Integrity (PEI). This study is conducted by Pippa Norris and Max Grömping for the Electoral Integrity Project based at the Universities of Sydney and Harvard. The PEI survey asks experts to evaluate electoral integrity. This codebook describes all variables included in the dataset release of April 2019 (release PEI_7.0).

Conceptual framework

The concept of ‘electoral integrity’ refers to international standards and global norms governing the appropriate conduct of elections. These standards have been endorsed in a series of authoritative conventions, treaties, protocols, and guidelines by agencies of the international community, notably by the decisions of the UN General Assembly, by regional bodies such as the Organization for Security and Cooperation in Europe (OSCE), the Organization of American States (OAS), and the African Union (AU), and by member states in the United Nations. Following endorsement, these standards apply universally to all countries throughout the electoral cycle, including during the pre-electoral period, the campaign, on polling day, and in its aftermath.

Measurement

To operationalize this notion, the PEI asks experts to evaluate elections using 49 indicators, grouped into eleven categories reflecting the whole electoral cycle. The dataset also includes a summary 100-point PEI Index based on summing all 49 indicators. The PEI index provides one way to summarize the overall integrity of the election. Alternatively, analysts can examine indices for each of the eleven dimensions, or use the disaggregated scores for each of the 49 individual indicators. In this way, data can be re-aggregated flexibly to construct any measure which is preferred conceptually. The PEI dataset is designed to provide a comprehensive, systematic and reliable way to monitor the quality of elections worldwide.

There are many ways to define an election expert. An expert is defined in this survey as a political scientist (or social scientist in a related discipline such as law, sociology, economics, anthropology, mathematics, or statistics) who has published on (or who has other demonstrated knowledge of) the electoral process in a particular country. Specifically, demonstrated knowledge is defined by the following criteria: (1) membership of a relevant research group, professional network, or organized section of such a group; (2) existing publications on electoral or other country-specific topics in books, academic journals, or conference papers; and (3) employment at a university or college as a teacher. Around forty experts per country were contacted for each election, including both domestic and international experts. The domestic/international distinction was made based on institutional affiliation, citizenship, and country of residence.

Respondents are contacted one month after the date of a national election in their country of expertise. In case of elections with several rounds (e.g. presidential elections with a run-off round), experts are contacted one month after the final round of the election. Three reminders are sent, each a week apart. Respondents completed the online questionnaire lasting approximately 15 minutes.

Data release

Data are available at: <http://thedata.harvard.edu/dvn/dv/PEI>. This Dataverse facility allows users to generate analysis using the online data, to download in Stata, R, SPSS and tab-delimited formats, and to find further technical details about the research design, codebook and questionnaire.

The pilot study (PEI_1), first released in May 2013, covered 20 elections held from 1 July 2012 to 31 December 2012. The second release (PEI_2) was made publically available in February 2014 and included all national elections held from 1 January to 31 December 2013. The midyear release (PEI_2.5) in August included all these earlier cases and expanded the comparison by adding elections occurring from 1 January 2014 to June 30, 2014. The third release of the dataset (PEI_3) included 2012 and 2013 cases and expands the comparison by including all national elections held from January 1st to December 31st 2014. In total PEI_3 included expert evaluations of 127 elections held in 107 countries. PEI_3.5 included the responses for 1,696 experts for 153 elections in 125 countries. PEI_4.0 gathered the opinion of 2,080 experts for 180 elections in 139 countries, which were updated in the mid-year release PEI_4.5 to 2,417 experts for 213 elections in 153 countries. PEI_5.0, released May 2017, included the assessment of 2,709 individual expert evaluations of 241 elections in 158 countries up until the end of 2016. The mid-year update, PEI_5.5, included 2,961 experts, 260 national elections, and 161 countries, covering until 30 June 2017. PEI_6.0, released in March 2018, included 3,253 experts, evaluating 285 national elections in 164 countries covering until 1 January 2018. The mid-year update, PEI_6.5, included 3,524 experts, 310 national elections, and 165 countries, covering until 30 June 2018.

The present data release, PEI_7.0, covers 3,861 experts evaluating 337 national elections in 166 countries, from 1 July 2012 to 31 December 2018

Three files are released in PEI_7.0:

1. An expert-level file (with individual-level results for 3,861 experts); [Marked 'X' in the codebook]
2. An election-level file (with results aggregated for each of the 337 separate contests); [Marked 'E' in the codebook]
3. A country-level file (with results aggregated for each of the 166 countries, useful for merging with cross-national data). If you have other data to merge, you can do so with the Correlates of War (COW) ccode variables, as well as the ISO 3-digit country classification. [Marked 'C' in the codebook]

In this codebook we present all the variables, how they were constructed and labelled. Since many variables appear in all three datasets, we differentiate between them in the last three columns. If there is an X, the variable is included at the expert level; if there is an E, the variable is included at the election level; and when there is a C, the variable is included at the country level. Unless otherwise noted, variables at the election and the country level are constructed by calculating the mean across all experts for the election/country. Ordinal variables are treated as continuous for the purpose of this aggregation.

Citation

Use of the dataset should be acknowledged and cited as:

Variables

Variable Name	Variable Label and Variable Description	Answer Label			
expert	Expert Reference number An anonymized expert reference number.	Open ended	X		
election	Election code An election is defined as a nation-wide contest either for the executive or the legislature where electors vote directly for the person (or party) on the ballot, excluding appointment indirectly by a committee or institutions such as the legislature. For countries with multiple election rounds, responses were collected on the second round. When elections were concurrent for the legislative and the executive (eg. in the United States), then only the higher-level executive office was included. Three-letter ISO abbreviation for the name of the country, followed by the date of the election (DD-MM-YYYY), the type of election (Presidential, P, or Legislative, L), and the round (1 or 2). Examples: Second round of Presidential elections in Cyprus on 24 February 2013: "CYP_24022013_P2" Pakistani Legislative elections on 11 May 2013: "PAK_11052013_L1"	Open ended	X	E	
date	Date of election	Open ended	X	E	
year	Year of election	Open ended	X	E	
office	What government body was this election for?	Expert-level: 0. Legislative 1. Presidential Election level: 0. Legislative 1. Presidential Country level: 0. Legislative 1. Presidential 2. Both	X	E	C
country	Country name This string variable is the name of the countries included in the study. The survey includes all independent nation-states with more than 100,000 inhabitants that held elections from 1 July 2012 to 30 June 2018. An independent nation-state is defined by membership of the UN General Assembly. Thus, dependent territories like Palestine are excluded. ⁱ	Open ended	X	E	C
cocodecow	COW country code Numeric country code from the Correlates of War. Source: State System Membership List, v2011. Available from: http://www.correlatesofwar.org/data-sets/cow-country-codes (accessed 20 April 2017).	Open ended	X	E	C

Refno	Norris country identifier Numeric country code from Pippa Norris's cross-national dataset on democracy. Source: Democracy Cross-national Data, Release 3.0 Spring 2009 http://www.pippanorris.com/		X	E	C
numresponses	Number of PEI expert responses, by election/country The number of responses for a particular contest. At country level: The sum of all experts who have responded for that country.	Open ended		E	C
contacted	Number of PEI experts invited, by election/country	Open ended		E	C

	The number of experts invited to respond for a particular contest. At country level: The sum of all experts who have been invited for that country.			
responserate	PEI expert response rate, election/country	Open ended	E	C
	The response rate for each election, calculated by dividing the number of responses per by the number of experts contacted. At country level: average response rate over all surveyed contests in that country.			
surveynum	# times country surveyed	1. Once 2. Twice 3. Three times 4. Four times		C
	The number of times that any particular country has been surveyed.			
y2012	Survey year 2012	0. Rest 1. 2012		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2012 and 0 otherwise.			
y2013	Survey year 2013	0. Rest 1. 2013		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2013 and 0 otherwise.			
y2014	Survey year 2014	0. Rest 1. 2014		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2014 and 0 otherwise.			
y2015	Survey year 2015	0. Rest 1. 2015		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2015 and 0 otherwise.			
y2016	Survey year 2016	0. Rest 1. 2016		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2016 and 0 otherwise.			
y2017	Survey year 2017	0. Rest 1. 2017		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2017 and 0 otherwise.			
y2018	Survey year 2018	0. Rest 1. 2018		C
	Dummy variable. It has two values: 1 if the country was included in the survey of 2018 and 0 otherwise.			
COUNTRYDATA	SECTION: COUNTRY DATA		X	E C
PR	Freedom House Political Rights Scale	Open ended	X	E C
	This scale covers the electoral process, political pluralism, participation and the functioning of government. Political rights are defined as those which enable people to participate freely in the political process. The year is matched to the date of the election. Countries are graded between 1 (most free) and 7 (least free). Therefore, the 2014 Freedom House report was used for 2013 elections. More detail are available at: www.freedomhouse.org			
CL	Freedom House Civil Liberties Scale	Open ended	X	E C
	The questions for the creation of the scale cover the freedom of expression and belief, associational and organizational rights, the rule of law and personal autonomy and individual rights. The year is matched to the date of the election. Countries are graded between 1 (most free) and 7 (least free). Therefore, the 2014 Freedom House report was used for 2013 elections. More details can be found at: www.freedomhouse.org			
fhcategory	Freedom House Score (Free, Partly Free, Not Free)	0. Not Free 1. Partly Free 2. Free	X	E C
	A variable coding the combined average ratings for Political Rights and Civil Liberties. Countries whose ratings average is from 1.0 to 2.5 are considered "Free", 3.0 to 5.0 "Partly Free", and 5.5 to 7.0 "Not Free". In PEI, 0 is not free; 1, partly free; 2, free.			
polity	Polity combined score (-10->+10), 1 year lag		X	E C
	The Polity scheme consists of six component measures that record key qualities of executive recruitment, constraints on executive authority, and political competition. It also records changes in the institutionalized qualities of governing authority. The elections held in 2013 have the values from 2012 because 2013 scores were not available at time of research. "Polity Score"			

	captures regime authority spectrum. The scores can be converted to regime categories. More details are available at: http://www.systemicpeace.org/inscrdata.html				
polity2	Polity combined score with mean subst for missing codes, 1 year lag		X	E	C
	Polity combined score with zero substitution for missing codes as recommended by the Polity project. The elections of 2013 have the values of 2012.				
durable	# years since the last regime transition (3pt or greater), 1 year lag		X	E	C
	The number of years since the last regime transition that led to a three point change or greater from previous year.				
gdp_pc_ppp	GDP per capita, PPP, const 2011 intl\$, 2yr.lag(WB)		X	E	C
	GDP per capita based on purchasing power parity (PPP). PPP GDP is gross domestic product converted to international dollars using purchasing power parity rates. An international dollar has the same purchasing power over GDP as the U.S. dollar has in the United States. GDP at purchaser's prices is the sum of gross value added by all resident producers in the economy plus any product taxes and minus any subsidies not included in the value of the products. It is calculated without making deductions for depreciation of fabricated assets or for depletion and degradation of natural resources. Data are in current international dollars based on the 2011 ICP round. Source: World Bank World Development Indicators.				
development	World Bank income level (Low, lower-middle, upper-middle, high)	1. Low income 2. Lower-middle income 3. Upper-middle income 4. High income	X	E	C
	The level of economic development according to the World Bank. It has four categories: low ,1; lower-middle, 2; upper-middle, 3; high, 4. Source: www.worldbank.org				
region	Geographic region (UN classification, 1-5)	1. Africa 2. Americas 3. Asia 4. Europe 5. Oceania	X	E	C
	Top-level region of the UN M-49 regional classification scheme.				
region9	Geographic region (World Bank classification, 1-9)	1. East & Southern Africa 2. West & Central Africa 3. East Asia & Pacific 4. South Asia 5. Eastern Europe 6. Western Europe 7. Middle East 8. North Africa 9. Americas	X	E	C
	This classifies the geographic region of the country according to the World Bank region.				
oecd	OECD country (0/1)	0. non-OECD 1. OECD	X	E	C
	Is the country holding the election a member of the Organization for Economic Co-operation and Development (OECD)?				
OVERALLINTEGRITY	SECTION: OVERALL INTEGRITY	Open ended	X	E	C
PEIIndexp	PEI index of electoral integrity, (0-100), raw	Open ended	X	E	C
	The PEI index is designed to provide an overall summary evaluation of expert perceptions that an election meets international standards and global norms. It is generated at the individual level using experts' answers to the 49 substantive variables below. Therefore, an Index score is missing if an expert does not answer a question. The 49 scores are summed and then standardized to a 100 point scale.				
PEIIndexp_lci	PEI Index (raw individual), low ci	Open ended		E	C
	The lower bound of the 95% confidence interval of the imputed PEI Index for the election and country level.				
PEIIndexp_hci	PEI Index (raw individual), high ci	Open ended		E	C
	The upper bound of the 95% confidence interval of the imputed PEI Index for the election and country level.				
PEIIndexi	PEI index of electoral integrity, (0-100), imputed	Open ended	X	E	C
	The PEI index is designed to provide an overall summary evaluation of expert perceptions that an election meets international standards and global norms. It is generated at the individual level. Unlike the individual index (PEIIndex)				

PEIIndexi is imputed and thus fully observed for all experts and states.

The imputation process was conducted in the following manner using Stata 15 at the expert unit of analysis. All 'Don't Knows' and 'Not Applicables' were replaced by missing values. The data were then imputed using multiple imputation and chained equations by section. The other variables in a section were thus used in the imputation equation along with five fully observed expert background characteristics (sex, agegroup, supported, lived, leftrightyscale). Twenty imputed values were then created for each variable taking 200 iterations after a 10 model burn-in. These values were collapsed to their mean value. In an identical manner used to generate PEIIndexp, the values for the 49 substantive variables were summed and standardized into a 0-100 point scale. The additive procedure has a very high reliability (Cronbach's alpha= 0.96) and the obtained scale is very strongly correlated ($r=0.9978^*$) with the first underlying dimension extracted with Principal Component Analysis. For more detail on the multiple imputation procedure see Royston, Patrick. 2004. "Multiple imputation of missing values." Stata Journal 4: 227-241 and Stata Multiple-Imputation Reference Manual: Release 13. College Station, TX: Stata Press, 137-164.

PEIIndexi_lci	PEI Index (imputed), low ci	Open ended	E	C
	The lower bound of the 95% confidence interval for the state level.			
PEIIndexi_hci	PEI Index (imputed), high ci	Open ended	E	C
	The upper bound of the 95% confidence interval for the state level.			
PEIIndex_rank	Rank of election/country, based on imputed PEI Index.	Open ended	E	C
rating	Rating of electoral integrity (1=very poor->10=very good)	Open ended	X	E C
rating_lci	Rating, low ci	Open ended	E	C
rating_hci	Rating, high ci	Open ended	E	C
PEItype	Descriptive type of electoral integrity	1. Very Low (less than 40) 2. Low (40-49) 3. Moderate (50-59) 4. High (60-69) 5. Very High (70 or more)	E	C
	Classification of the PEI Index on five categories.			
lag_PEIIndexi	Lagged PEI index of electoral integrity, (0-100), imputed	Open ended	E	
	The PEI index (imputed) of the previous election for the same office (presidential or otherwise) held in the same country.			
lag_PEIIndexi_lci	Lagged PEI Index (imputed), low ci	Open ended	E	
	The lower bound of the 95% confidence interval of the lagged imputed PEI Index.			
lag_PEIIndexi_hci	Lagged PEI Index (imputed), high ci	Open ended	E	
	The upper bound of the 95% confidence interval of the lagged imputed PEI Index.			
trend	Trend of electoral integrity	-1. Decrease 0. Unchanged 1. Increase	E	
	The trend in electoral integrity, compared to the previous election for the same office (presidential or otherwise) held in the same country. "Increase", if lag_PEIIndexi_hci < PEIIndexi_lci. "Decrease, if lag_PEIIndexi_lci > PEIIndexi_hci. If confidence intervals of contemporaneous and lagged PEIIndexi overlap, this is recorded as "Unchanged".			
LAWS	ELECTORAL LAWS SECTION	Open ended	X	E C
	In the electoral law questions, all respondents read this header:			
	"1/16 When thinking about the electoral laws used in the last national election in this country, do you agree or disagree with the following statements?"			
lawsunfair	1-1a. Electoral laws were unfair to smaller parties (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E C

lawsunfair2	1-1b. Electoral laws were unfair to smaller parties (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.	1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
favoreddincumbent	1-2a. Electoral laws favored the governing party or parties (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
favoreddincumbent2	1-2b. Electoral laws favored the governing party or parties (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.	1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
citizens	1-3a. Elections laws restricted citizens' rights (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
citizens2	1-3b. Elections laws restricted citizens' rights (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.	1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
laws	1-4. Electoral laws index (0-100) This is an additive scale created by summing the three previous variables (lawsunfair2, favoreddincumbent2, citizens2) and standardized to a 100 point scale. Higher values denote higher integrity.	Open ended	X	E	C
lawsi	1-4i. Electoral laws index (0-100), imputed This is an additive scale created by summing the three previous variables (lawsunfair2, favoreddincumbent2, citizens2), with missing values substituted via multiple imputation, and standardized to a 0-100 point scale. Higher values denote higher integrity.	Open ended	X	E	C
PROCEDURES	ELECTORAL PROCEDURES SECTION In the electoral procedures section, all respondents read this header: "2/16 In terms of electoral procedures... Do you agree or disagree with the following statements?"	Open ended	X	E	C
managed	2-1. Elections were well managed (1-5)[P]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
votinginfo	2-2. Information about voting procedures was widely available (1-5)[P]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree	X	E	C

			4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable			
fairofficials	2-3. Election officials were fair (1-5)[P]		1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
legalelections	2-4. Elections were conducted in accordance with the law (1-5)[P]		1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
procedures	2-5. Electoral procedures index (0-100) This is an additive scale created by summing the four previous variables (managed, votinginfo, fairofficials, legalelections) and standardized to a 100 point scale.		Open ended	X	E	C
proceduresi	2-5i. Electoral procedures index (0-100), imputed This is an additive scale created by summing the four previous variables (managed, votinginfo, fairofficials, legalelections), with missing values substituted via multiple imputation, and standardized to a 0-100 point scale. Higher values denote higher integrity.		Open ended	X	E	C
BOUNDARIES	BOUNDARIES FOR VOTING DISTRICTS SECTION In the electoral procedures section, all respondents read this header: "3/16 Turning to the process of drawing boundaries for voting districts... In some countries the electoral district boundaries are re-defined at intervals, a process also known as 'redistricting'. If this does not apply, please reply 'not applicable'. Do you agree or disagree with the following statements?"		Open ended	X	E	C
bdiscrim	3-1a. Boundaries discriminated against some parties (1-5)[N]		1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
bdiscrim2	3-1b. Boundaries discriminated against some parties (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.		1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
bfavored	3-2a. Boundaries favored incumbents (1-5)[N]		1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
bfavored2	3-2b. Boundaries favored incumbents (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.		1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree	X	E	C

		5. Strongly Disagree .d. Don't know .n. Not Applicable			
bimpartial	3-3. Boundaries were impartial (1-5)[P]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
boundaries	3-4. Voting district boundaries index (0-100) This is an additive scale created by summing the three previous variables (bdiscrim2, bfaored2, bimpartial) and standardized to a 100 point scale.	Open ended	X	E	C
boundariesi	3-4i. Voting district boundaries index (0-100), imputed This is an additive scale created by summing the three previous variables (bdiscrim2, bfaored2, bimpartial), with missing values substituted via multiple imputation, and standardized to a 0-100 point scale. Higher values denote higher integrity.	Open ended	X	E	C
VOTERREGISTRATION	VOTER REGISTRATION SECTION In the voter registration section, all respondents read this header: "4/16 Turning to voter registration... Do you agree or disagree with the following statements?"	Open ended	X	E	C
reglisted	4-1a. Some citizens were not listed in the register (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
reglisted2	4-1b. Some citizens were not listed in the register (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.	1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
reginaccurate	4-2a. The electoral register was inaccurate (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
reginaccurate2	4-2b. The electoral register was inaccurate (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher integrity.	1. Strongly Agree 2. Agree 3. Neither agree nor disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable	X	E	C
ineligible	4-3a. Some ineligible electors were registered (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C
ineligible2	4-3b. Some ineligible electors were registered (1-5)[P] This is the reversed coding of the previous item. Higher values denote higher	1. Strongly Agree 2. Agree 3. Neither agree nor	X	E	C

	integrity.	disagree 4. Disagree 5. Strongly Disagree .d. Don't know .n. Not Applicable			
votereg	4-4. Voter registration index (0-100)	Open ended	X	E	C
	This is an additive scale created by summing the three previous variables (reglisted2, reginaccurate2, ineligible2) and standardized to a 100 point scale.				
voteregi	4-4i. Voter registration index (0-100), imputed	Open ended	X	E	C
	This is an additive scale created by summing the three previous variables (reglisted2, reginaccurate2, ineligible2), with missing values substituted via multiple imputation, and standardized to a 0-100 point scale. Higher values denote higher integrity.				
PARTYREGISTRATION	PARTY AND CANDIDATE REGISTRATION SECTION	Open ended	X	E	C
	In the registration process section for parties and voters, all respondents read this header:				
	"5/16 Thinking about the registration process for parties and candidates to get on the ballot... Do you agree or disagree with the following statements?"				
oppprevent	5-1a. Some opposition candidates were prevented from running (1-5)[N]	1. Strongly Disagree 2. Disagree 3. Neither agree nor disagree 4. Agree 5. Strongly Agree .d. Don't know .n. Not Applicable	X	E	C

LSQINDEX	Least squares index	Open ended	E
	Measures the disparity between the distribution of votes at the election and the allocation of seats in parliament. Source: Michael Gallagher and Paul Mitchell (eds). 2008. The Politics of Electoral Systems. Oxford University Press.		
ENEP	Effective number of parties at the electoral level	Open ended	E
	The measurement counts political parties and their relative strength in terms of vote shares. Source: Markku Laakso and Rein Taagepera. 1979. "Effective" Number of Parties: A Measure with Application to West Europe" Comparative Political Studies April, 12: 3-27		
ENPP	Effective number of parties at the parliamentary or legislative level	Open ended	E
	The measurement counts parties and their relative strength in regards to parliamentary seat shares. Source: Markku Laakso and Rein Taagepera. 1979. "Effective" Number of Parties: A Measure with Application to West Europe" Comparative Political Studies April, 12: 3-27		

Coverage

The PEI survey of electoral integrity focuses upon independent nation-states around the world which have held direct (popular) elections for the national parliament or presidential elections. The criteria for inclusion are listed below. The elections analyzed in this report cover the period from 1 July 2012 to 31 December 2018. In total, PEI 7.0 covers 337 elections in 166 nations.ⁱⁱ

Criteria for inclusion in the survey	#	Definition and source
Total number of independent nation-states	194	Membership of the United Nations (plus Taiwan)
Excluded categories		
Micro-states	11	Population less than 100,000 as of 2013: Andorra, Dominica, Liechtenstein, Marshall Islands, Monaco, Nauru, Palau, San Marino, Seychelles, St. Kitts and Nevis, and Tuvalu.
Without de jure direct (popular) elections for the lower house of the national legislature	5	Brunei Darussalam, China, Qatar, UAE, and Saudi Arabia
State has constitutional provisions for direct (popular) elections for the lower house of the national legislature, but none have been held since independence or within the last 30 years (<i>de facto</i>).	3	Eritrea, Somalia, and South Sudan
State has direct elections for the lower house of the national legislature but only candidates for the ruling party have ballot access, excluding independents and candidates for any other party.	2	North Korea, Cuba
Not yet included in the survey	7	Democratic Republic of the Congo, Kiribati, Libya, Saint Lucia, Saint Vincent and the Grenadines, Trinidad and Tobago, Yemen. ⁱⁱⁱ
Covered to date in the PEI 7.0 dataset (from mid-2012 to end-2018)	166	96% of all the subtotal of nation-states

Because of the selection rules, elections contained in each cumulative release of the PEI survey can be treated as a representative cross-section of *all* national presidential and legislative elections around the world (with the exception of the exclusion of micro-states). The countries in PEI 7.0 are broadly similar in political and socio-economic characteristics to those countries holding national elections which are not yet covered in the survey, with the exception of being slightly larger in population size.

ⁱ One reason for excluding micro-states is the lack of sufficient election experts. From the list of all 193 UN member states, 11 are excluded as micro states, because they have a population of less than 100,000 people in 2013 and no sufficient pool of experts can be established for these. These micro states are: Andorra, Dominica, Liechtenstein, Marshall Islands, Monaco, Nauru, Palau, Saint Kitts and Nevis, San Marino, Seychelles, and Tuvalu. Five countries are excluded because their constitution does not provide for national-level elections. These are Brunei Darussalam, China, Qatar, UAE, and Saudi Arabia. Three countries – Eritrea, Somalia and South Sudan – are currently excluded because even though they have constitutional provisions for national elections, none have been held since independence or within the last 30 years.

ⁱⁱ In addition, in 2014 elections in Haiti, Lebanon, and Comoros were delayed or suspended. Those are thus not included in the dataset. The election in Thailand was held and later annulled. There were also elections in Trinidad and Tobago but with too few responses this case is excluded from the dataset. Three election in 2018 (DR Congo, Togo, Bangladesh) were held after field work concluded and are thus not covered.

ⁱⁱⁱ Cases in the list are not yet included in the dataset either because the number of responses fell below the minimum cut off point or because elections have been delayed during the period of data collection.
